DESCRIPTORS: *Frequency, *Neutrons, *Quartz,
*Crystals, Elasticity, Anisotropy, Crystal structure,
Radiation damage, Vibration, Radiation effects.

The frequencies of the strongest natural vibrations of a
thick x-cut quartz crystal are determined before and
after neutron irradiation. Increases as well as de-
creases are found. On the basis of the results obtained
by Bechmann attempts are made to draw conclusions
with respect to the variation of the moduli of elasticity.
